

RESTORING LITTLETHORPE MANOR GARDENS

The Location:

Littlethorpe Manor Gardens, England

The Requirement:

Restoration work was due to take place on a beautiful pond located amidst the lush eleven acre gardens at Littlethorpe Manor in Ripon, North Yorkshire.

A key requirement of the job was that the gardens, wildlife and formal grounds were not disturbed by the heavy plant equipment that would be on site.

The Solution:

Ground-Guards recommended MultiTrack as these environmentally friendly boards are strong, easy to lay, simple to install and convenient to relocate mid-job if necessary.

A total of 140 MultiTrack boards were hired; these were installed quickly to form a temporary roadway through the gardens to the pond.

The Outcome:

The client was delighted with the outcome. Renovation work was able to proceed with minimum disruption and zero damage to the beautiful grounds and manor gardens. The pond has been successfully repaired – another job well done...
