

The Location:

Manufacturer's warehouse,
Warwick

The Requirement:

The owners of a brand new state-of-the-art factory and warehouse needed a solution to protect the newly finished concrete flooring from damage that could be caused by the heavy use of fork lifts, cherry pickers, pallet trucks, barrows and other mobile plant equipment. They wanted a temporary floor cover that was strong, easy to install and capable of withstanding several weeks' worth of traffic.

The Solution:

We recommended FastCover as the ideal mat to create a durable, heavy duty indoor work surface. Featuring smooth joins and gentle edging ramps, FastCover eliminates trip hazards, creating a safe work area for the mobile plant. The mats are simple to lay without mechanical aid, easy to manoeuvre and reusable from job to job, so the client was delighted with the return on investment that they got.

The Outcome:

A quick installation and an aesthetically pleasing, functional flooring solution; FastCover has yet again provided optimal protection for expensive hard flooring.

A job well done!
