

### The Location:

Hersham Football Club in  
Weybridge, England

### The Requirement:

An infrastructure management consultancy required access for a 20 tonne drilling rig and light commercial vehicles across a pitch at Hersham Football Club in Weybridge.

How could they mobilise their assets without tearing up the soft ground during the wet winter months?

### The Solution:

Ground-Guards recommended the installation of a temporary twin trackway across the pitch using MultiTrack mats.

These would join with a 15m<sup>2</sup> pad area which would cater for vehicles that needed to turn or park.

MultiTrack is a great choice for this project as the mats are lightweight, portable, easy to install by hand and incredibly strong: guaranteed unbreakable up to 120 tonnes!

### The Outcome:

A neat and tidy trackway and pad area - strong, reliable and efficient - was built in next to no time, providing perfect ground protection for the soft grass underneath whilst minimising disruption to the football club.

Another job well done!
