

### The Requirement:

When Parks and Landscapes services and grave-digging teams perform grave digging and maintenance duties, it is crucial that the work is conducted quickly, cleanly and without causing major disruptions to these sensitive and emotional public areas. Grassed areas, lawns and verges need protecting from disruptive mini excavators and diggers, not only from severe ground rutting but also from unsightly muddy tyre tracks.

### The Solution:

Ground-Guards recommend MultiTrack as the perfect ground protection solution. MultiTrack is portable, strong and easy to install – enabling works to be carried out quickly and efficiently with minimal disruption. The lightweight 39kg mats can be comfortably handled by two workers, negating the need for expensive lifting equipment. Afterwards the mats can then be packed up quickly, washed off and reused for the next job in hand – generating a winning return on investment!

### The Outcome:

An unused field was safely transformed into a large functional car park, providing enough space for an additional 270 vehicles to park. This allowed thousands of extra visitors to attend the Park's Festival of Light, with zero slips, trips or wheels stuck in the mud!

Another job well done.
