

The Customer:

Machine Rental Company

The Requirement:

A leading UK machinery rental company, in order to fulfil their own customers' needs, wanted to invest in temporary trackway mats.

They chose Ground-Guards' Multi-Track, and, delighted with the product, they quickly returned to hire more stock.

But this time they needed a safe and secure option to transport and store them.

The Solution:

We recommended our SafeStore Stillages as these are hands-down the best way to keep a yard or warehouse safe and tidy. Made from fully high quality galvanised steel, the Stillages are stackable vertically, which is a great way to save space, and they are fitted with built-in fork-lift channels, making them very easy to pick up and stack. They are also fitted with tough integral ratchet straps, preventing movement of boards in transportation.

The Outcome:

Our customer was delighted with this solution because it enabled a large volume of MultiTrack mats to be transported and stored neatly. Their yard is now a safer working environment for staff, vehicles and visitors alike. A simple but effective solution!
