

### The Location:

East Sussex, England

### The Requirement:

A new crematorium being built in Wealdon required access for heavy vehicles across a working farm-yard. Concerns were raised about the weight of the muck-away lorries wrecking the concrete yard, as well as mud spillage on the main road causing health and safety concerns. The contractor contacted Ground-Guards for help, as the issue was causing serious concern. Ground-Guards were on site next day and within 48 hours had designed a solution.

### The Solution:

Within a few days the client signed off the design and, despite being 250 miles away, our installation team drove through the night to be on-site the next day at 7am to install the trackway. The early start and rapid deployment associated with MaxiTrack was critical as there was a minimal amount of stoppage time allowed. With trucks backing up – the pressure was on. But our team delivered the solution quickly and with no delays!

Using MaxiTrack - a portable, easy-to-lay, high traction mat guaranteed unbreakable by vehicles up to 130 tonnes – the haul road protected the concrete yard underneath from the heavy-duty lorries, significantly reducing the spillage

### The Outcome:

A neat, tidy, functional roadway. The client was delighted with our speed of response, the advice and consultation we gave, and the quality of the final solution.
