

# MultiMatts EuroTrak

## Temporary Access Mats

The EuroTrak mat can be used over soft or sensitive ground, on hard standing areas or firmer ground. These mats are particularly suited to landscapers, construction sites and outdoor events.

These mats are manufactured from 100% recycled high density polyethylene (HDPE). They are ideal for quickly providing temporary access routes for construction site traffic and work personnel, and also for cars and visitors at public events. EuroTrak mats have 6 strategically positioned hand holes which makes them easy to off-load from trucks or pallets. Their lightweight but heavy duty nature, also reduces transport costs, as well as enabling quick and easy installation by two people.

EuroTrak mats have a highly engineered, 'non-slip' surface, this substantially improves the grip and reduces slippage, even in the most challenging weather or ground conditions.

EuroTrak Temporary Access Mats can be connected together using the simple but yet effective Hand Hole Connectors which slip through each hand hole and connect from the top with bolt and washers.

### SPECIFICATIONS

Size: 2.4m x 1.2m x 15mm

Weight: 44kg per mat

Material: 100% recycled polyethylene

- *6 Hand holes for easy handling and installation*
- *Non-slip surface for optimal grip*
- *Unique hand hole connectors*
- *Low transportation and handling costs*
